Profile

Computer Science Engineering graduate (2026) with hands-on experience building full-stack web applications and machine learning solutions. Skilled in Python, Flask, SQL, REST APIs, HTML, CSS, JavaScript, and React. Passionate about software development, problem-solving, and developing scalable applications with clean and efficient code.

Education

Visakha Institute of Engineering & Technology – B.Tech, Computer Science Engineering 2022–2026
GPA: 7.0

Sri Chaitanya Junior College – Intermediate (MPC) 2020–2022
GPA:7.0

Sri Chaitanya School – Class X 2019–2020
GPA:9.7

Internships

Full Stack Development Intern – ExcelR Raising Excellence (Remote) Nov 2025–Mar 2026

- Developed responsive web applications using HTML, CSS, JavaScript, React.js, Node.js and Express.js.
- Implemented REST APIs and integrated backend services with databases.

Data Analytics Intern – ExcelR (Remote) May–Jun 2025

- Collected, cleaned and analyzed datasets using Python, SQL, Excel and Power BI.
- Built reports and dashboards for business analysis and decision making.

Projects

Customer Churn Prediction System Python, Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn
Live Demo

- Developed a machine learning model to predict customer churn using data preprocessing, feature engineering, and exploratory data analysis (EDA).
- Trained and evaluated classification models using Scikit-learn, improving prediction performance through feature selection and hyperparameter tuning.
- Visualized customer behavior and churn patterns with Matplotlib and Seaborn to generate actionable business insights for customer retention.
- Achieved 87 percent of prediction accuracy using Random Forest.

Real-Time Inventory Management System Python, Flask, MySQL, JavaScript, REST APIs, Git
Live Demo

- Developed a full-stack Inventory Management System with secure user authentication, product management, supplier management, and real-time inventory tracking using Python (Flask) and MySQL.
- Implemented CRUD operations, purchase and sales modules, and automatic stock updates with low-stock alerts to streamline inventory control and improve operational efficiency.
- Designed RESTful APIs and an interactive dashboard to monitor inventory, sales, and stock levels, following a scalable and modular architecture suitable for real-world business applications
- Deployed the application on Render and integrated GitHub for continuous deployment.

Technical Skills

Programming Languages:	Python, JavaScript, SQL
Frontend:	HTML5, CSS3, React.js
Backend:	Flask, REST APIs, JWT Authentication
Machine Learning:	Pandas, NumPy, Scikit-learn, Matplotlib
Databases:	MySQL
Data Visualization:	Power BI, Microsoft Excel
Tools:	Git, GitHub, VS Code, Jupyter Notebook, Google Colab

Achievements

- Successfully developed and deployed a full-stack Inventory Management System on Render.
- Built two end-to-end software projects applying Python, Flask, SQL, Machine Learning, and REST APIs.
- Completed Full Stack Development and Data Analytics internships with hands-on industry projects.
