Profile

B.Tech Computer Science graduate (2026) with internship and project experience in full-stack development and data analytics. Skilled in Python, SQL, Flask, JavaScript, REST APIs, data preprocessing, and machine learning fundamentals. Experienced in developing web applications, implementing database operations, analyzing datasets, and building interactive dashboards. Seeking an entry-level software development or data-focused role to apply technical and problem-solving skills.

Education

Visakha Institute of Engineering & Technology – B.Tech, Computer Science Engineering 2022–2026
CGPA: 8.0/10

Sri Chaitanya Junior College – Intermediate (MPC) 2020–2022
GPA: 7.0/10

Sri Chaitanya School – Class X 2019–2020
GPA: 9.7/10

Internships

Full Stack Development Intern – ExcelR Raising Excellence (Remote) Nov 2025–Mar 2026

- Worked with HTML, CSS, JavaScript, Flask, and REST API concepts during full-stack development tasks.
- Practiced integrating frontend components with backend functionality and handling application data.
- Supported debugging, functionality checks, and technical documentation based on project requirements.

Data Analytics Intern – ExcelR (Remote) May–Jun 2025

- Cleaned, transformed, and analyzed datasets using Python, SQL, and Excel.
- Prepared visualizations and summarized analytical findings to support data-driven decisions.

Technical Skills

Programming:	Python, SQL, JavaScript
Frontend:	HTML, CSS, React.js
Backend:	Flask, REST APIs
Databases:	MySQL
Data Science:	Pandas, NumPy, Scikit-learn, Matplotlib
BI & Reporting:	Power BI, Microsoft Excel
Development Tools:	Git, GitHub, VS Code
Core Skills:	Problem-solving, debugging, data validation, technical documentation

Projects

Real-Time Inventory Management System Python, Flask, SQLite, HTML, CSS, JavaScript

Live Demo

- Developed a web-based inventory application using Flask and SQLite to manage product records.
- Implemented product creation, updating, deletion, search, filtering, and low-stock visibility.
- Used Git and GitHub for version control and deployed the application online.

Customer Churn Prediction System Python, Pandas, NumPy, Scikit-learn, Streamlit

Live Demo

- Built a machine learning application to predict customer churn using the Random Forest algorithm.
- Preprocessed customer data, handled missing values, and prepared features for model training.
- Evaluated model performance with approximately 80% accuracy and deployed an interactive Streamlit application.

E-Commerce Revenue & Customer Analytics SQL, MySQL, Microsoft Excel, Power BI

Live Dashboard

- Analyzed e-commerce sales and customer data to evaluate revenue, profitability, order volume, and customer activity.
- Used SQL and MySQL to organize data and derive key business performance indicators.
- Presented sales, profit, order, and customer metrics through an interactive dashboard.
